

Providing environment-friendly products and action plan

We at Kubota are tackling the development of environment-friendly products as our environment-concerning activities for the products, setting up the achievement goals by product in the five fields shown below.

Results of tackling environment-friendly products in fiscal 2002 (completed products)

Name of consolidated division	Group of products	Fields					Contents tackled	Progressing ratio of sales ratio (%) (note)
		A	B	C	D	E		
Industrial infrastructure	Iron pipes						Water purification	38
	Steel pipes						Effective use of energy, reducing waste soil in construction	65
	Plastic pipes						Using recycled raw material, controlling used pipes generation	93
	Valves						Reducing weight, reducing waste soil in construction	69
	Materials						Reducing fuel consumption, alternative substances to chemicals, reducing drainage noise, reducing waste soil in construction, tree planting	65
Farm and industrial machinery	Tractors						Easily disassembling design, reducing exhaust gas, reducing exhaust noise and running noise	100
	Working machines						Reducing weight, reducing number of parts	65
	Agriculture-related products						Water pollution prevention, recycling wastes	100
	Agricultural facilities						Reducing electric power consumption, water pollution prevention	43
	Construction machinery						Recycling used parts, reducing chemicals, reducing exhaust gas and noise	94
	Engines						Reducing exhaust gas	100
	Electric equipments						Saving resources, reducing electric power consumption	35
Environmental engineering	Automatic vending machines						Reducing electric power consumption	79
	Drinking water and sewage						Reducing electric power consumption, water purification, reducing wastes	51
	Water environment						Water purification, reducing wastes, effective use of wastes	23
	Recycling						Reducing weight, reducing electric power consumption, reducing noise and vibration, reducing wastes	57
Housing materials and utilities	Pumps						Effective use of energy, water purification	100
	Housing material						Using recycled raw material, reducing chemicals	96
	Joukaso						Reducing waste soil in construction, water purification	94
-	Air condition equipment						Controlling generation of wastes, reducing electric power consumption, reducing chemicals	64

(note) We specified the products which should be considered to be environment-friendly in our whole products. (specified products) We set up the goal of the environment-friendly products sales to whole sales ratio in the specified products by division.

Progressing ratio of sales ratio=results of environment-friendly products sales to the whole sales ratio in fiscal 2002 / goals of environment-friendly products sales to the whole sales ratio in fiscal 2005
