

## Environmental Risk Management

### Environmental risk management

KUBOTA conducts its corporate activities in strict accordance with proper work standards to ensure full compliance with all applicable laws and to prevent environmental problems and minimize environmental risks, while also implementing inspections and maintenance as necessary for the optimal operation of machines and equipment. Based on the premise that an environmental accident may

occur at any time, we have established accident-response procedures to control contamination and carry out regular training to prepare for unusual events and emergencies. KUBOTA is fully prepared to cope with any serious environmental problem that may arise, promoting crisis-response management on a company-wide basis.

### Drill example for abnormal or emergency conditions (Tochigi Plant, KUBOTA Air Conditioner, Co., Ltd.)

At this plant, a safety drill was conducted in order to prepare for the possibility of spillage of coating materials at our hazardous material warehouse. (June 25, 2008)

Instructions were given to the employees participating in the drill.

Water was used in place of coating materials.

Sand was scattered to absorb the coating materials.

Absorbents were placed around the spill to prevent its further spread.
